A curated starting point for engineers, students, and anyone building technology skills. Each provider below links directly to its official learning page or course catalog.

How to use this directory

Open a provider link to browse courses. “Free” usually means the learning content is accessible without tuition; certificates, exams, hardware, premium labs, or selected advanced courses may still have a fee. Offerings and eligibility can change, so verify the current terms on each official page.

Embedded and hardware

1. Qualcomm Academy
Selected free courses in 5G, AI, IoT, and related technologies. Check course listing for free availability.
Open official learning page →

2. Microchip University
Free online technical courses in embedded control, C programming, motor control, communications, security, and hardware design.
Open official learning page →

3. STMicroelectronics — STM32 MOOCs
Free online STM32 MCU/MPU training, MOOCs, and technical learning materials.
Open official learning page →

4. Texas Instruments — TI Precision Labs
On-demand tutorials and technical how-to learning in analog and embedded processing.
Open official learning page →

5. Arm Education
Computing and engineering education resources, including embedded and IoT course offerings; check individual course pricing and availability.
Open official learning page →

6. Arduino Academy
Arduino Academy course catalog; some offerings are free and course conditions vary.
Open official learning page →

7. Intel Developer Training
Free self-paced AI, edge AI, IoT and developer learning resources.
Open official learning page →

8. NVIDIA Deep Learning Institute
A selection of free self-paced courses in AI, deep learning, CUDA, and related topics; not every course is free.
Open official learning page →

Software, cloud, and digital skills

9. IBM SkillsBuild
Free learning catalog and paths in AI, cybersecurity, data, cloud, and technology skills.
Open official learning page →

10. Cisco Networking Academy
Free self-paced courses in networking, cybersecurity, programming, and digital skills.
Open official learning page →

11. Microsoft Learn
Free self-paced modules and learning paths for Microsoft products, cloud, AI, security, and development.
Open official learning page →

12. AWS Skill Builder
Hundreds of free digital courses and learning resources; some labs and subscriptions are paid.
Open official learning page →

13. Red Hat Training
Selected free introductory courses and technical overviews; deeper courses and certifications may be paid.
Open official learning page →

14. Linux Foundation Education
A library of free learning assets and e-learning courses in Linux and open-source technologies; some training and certifications are paid.
Open official learning page →

15. Google Cloud Skills
Google Cloud learning paths and training resources; some labs and learning options may have fees.
Open official learning page →

16. Espressif — ESP32 resources
Technical documentation, tutorials, and developer resources for ESP32; structured course availability can vary.
Open official learning page →

17. Grow with Google
Free digital-skills training in areas such as career skills and technology; some certificates/programs may be paid.
Open official learning page →

18. Intel AI and Edge AI Training
Free self-paced AI learning and on-demand training, including edge AI topics.
Open official learning page →

19. Samsung Innovation Campus
AI and programming course programs; free access and enrollment can depend on region and cohort.
Open official learning page →

20. Cisco Skills for All
Free online learning in cybersecurity, networking, and digital skills; associated with Cisco Networking Academy.
Open official learning page →

Good starting picks for embedded engineers

Microchip University, STMicroelectronics STM32 MOOCs, TI Precision Labs, Arm Education, Intel Developer Training, and NVIDIA DLI are particularly relevant for embedded, hardware, edge AI, or adjacent engineering skills. For cloud and general AI foundations, consider AWS Skill Builder, IBM SkillsBuild, Microsoft Learn, and Google Cloud Skills.
